FASTENERS

These are the fasteners used in the assembly of Perfect Spaces Storage Systems:

Drawer Face Screw

Wood Screws
(1¼", 2", 3")

Rafix Connector Stud

Sharpie
(½" & ¾")

Shelf Pin

Pan Head Screw
(⅝")

EZ Anchor

L-Bracket

Mending Plate

Euro Screws
(Short / Long)

Breakaway Screws (Gold / Silver)

When purchasing your first closet you will receive a supply of fasteners adequate to complete the installation of your storage system. On your next closet order you will need to include a parachute bag stocked with a supply of fasteners. Please see the "Parachute Bags & Fasteners" guide/video for details.

Need more installation information?

Scan this QR code for detailed procedures and helpful technical tips in our full installation manual.

To install a corner unit you will follow these same basic procedures covered in our wall and floor mount installation guides/videos.

Here we'll cover the unique procedures for corner unit installation; please refer to the wall/floor mount guides/videos for further installation details.

If your unit is wall mounted be sure to carry over your level line from the wall containing your other units and mount the rail to the wall as described in our wall mount guide/video.

Identify your corner cleat and install your Rafix connector studs in it and the other vertical panel of your unit. Treat the cleat the same as a vertical panel when installing your Rafix connector studs, placing them in the top holes as well as in any other holes where a fixed shelf will be mounted (consult your elevation paperwork to determine their placement).

Install corresponding Rafix connector studs on the adjacent unit.

If your unit is floor mounted, identify your bottom shelf and install the two toe kicks at a right angle from each other using three inch screws in the pre-drilled holes. In addition to the toe kicks, locate and install the bottom shelf support in the same manner.

If your corner unit is wall hung, place the cleat on the rail against the wall. In the case of a floor mounted unit, rest the cleat on the floor against the wall.

*The cleat is the key difference between a corner and other units.
Once it's in place you can mount your vertical panels and fixed
shelves much as you would in any other unit.*

Tighten the cams on the corner cleat studs in addition to the ones on the vertical panels.

Once you have your fixed shelves installed, the corner cleat should be anchored to the wall's corner stud using three inch wood screws- at least one in the top and the bottom.

Finally, secure the rest of the corner unit to the wall in the same manner as you would with other units.

Please refer to the wall or floor mount installation guides/videos for specific instructions as this is done differently depending on the type of installation.
